

Outflows at mas scales

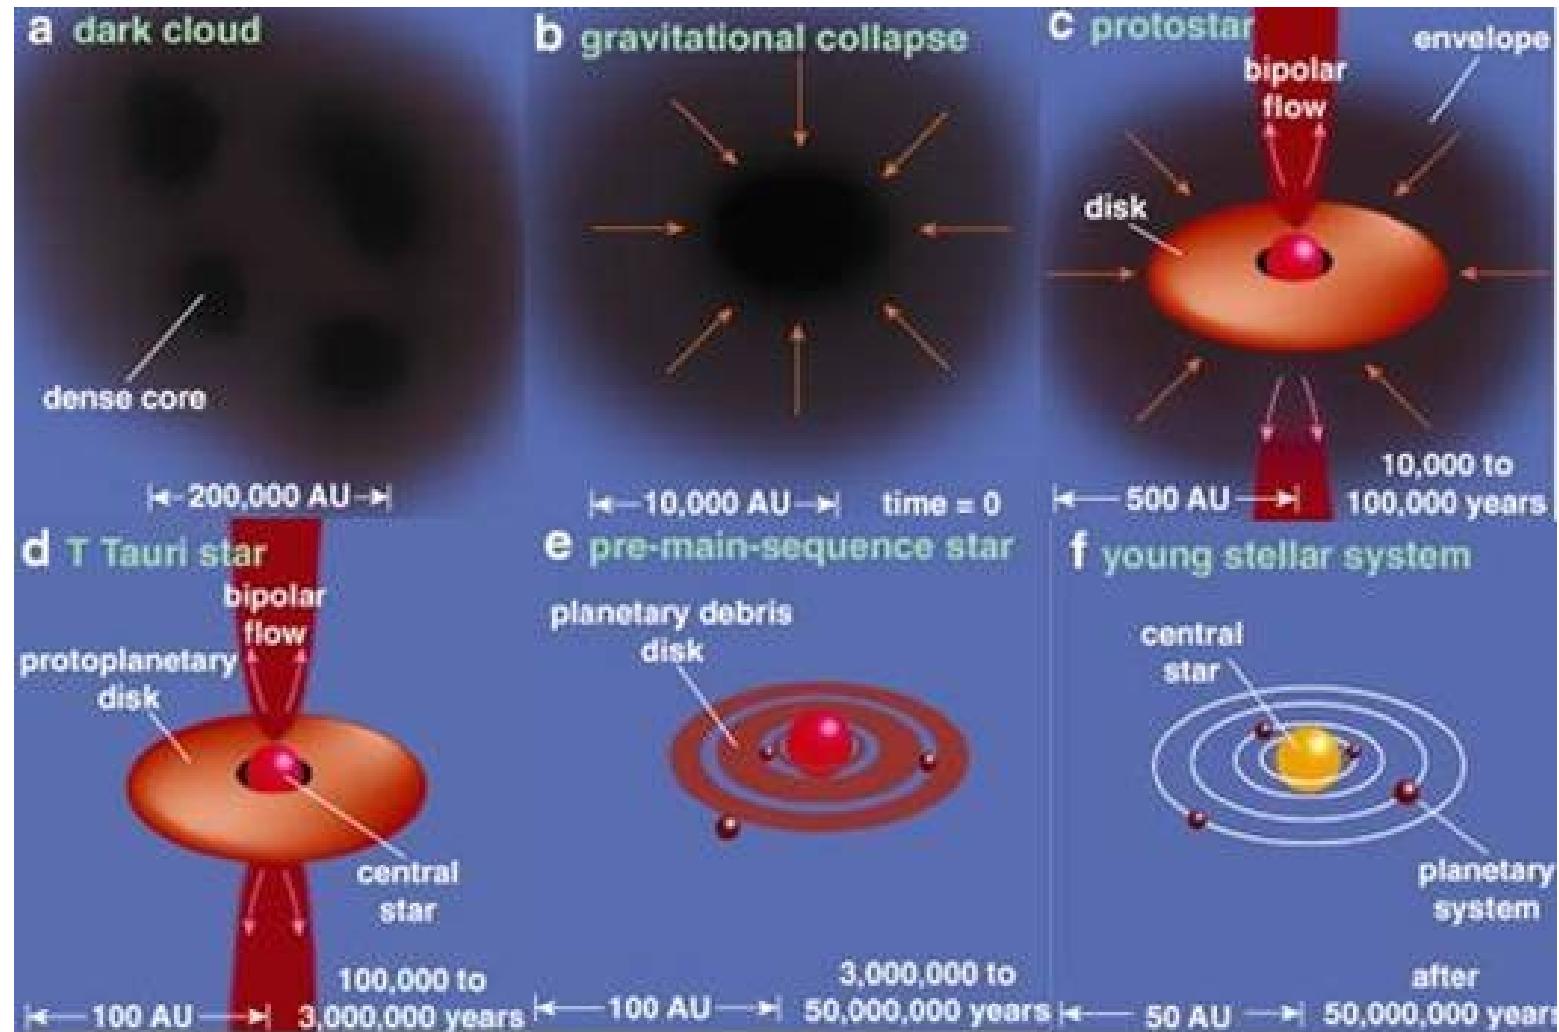

The winds and disks of young massive stars

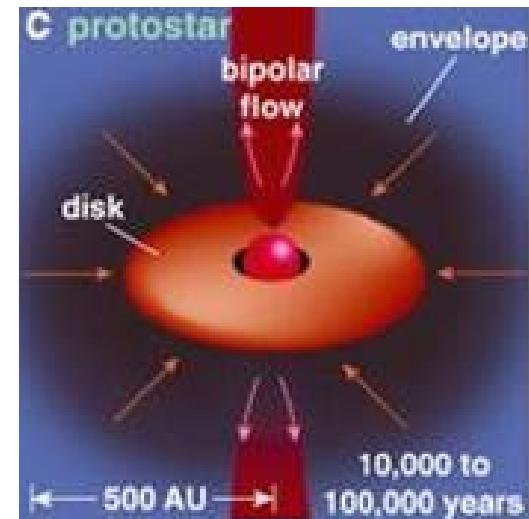

W.J. de Wit (ESO)
M. Beltran (Arcetri), A. Caratti o Garatti (Dublin),
P. Boley (Ekatarinburg), B. Stecklum (Tautenberg),
R.D. Oudmaijer (Leeds)

SF in a nutt shell

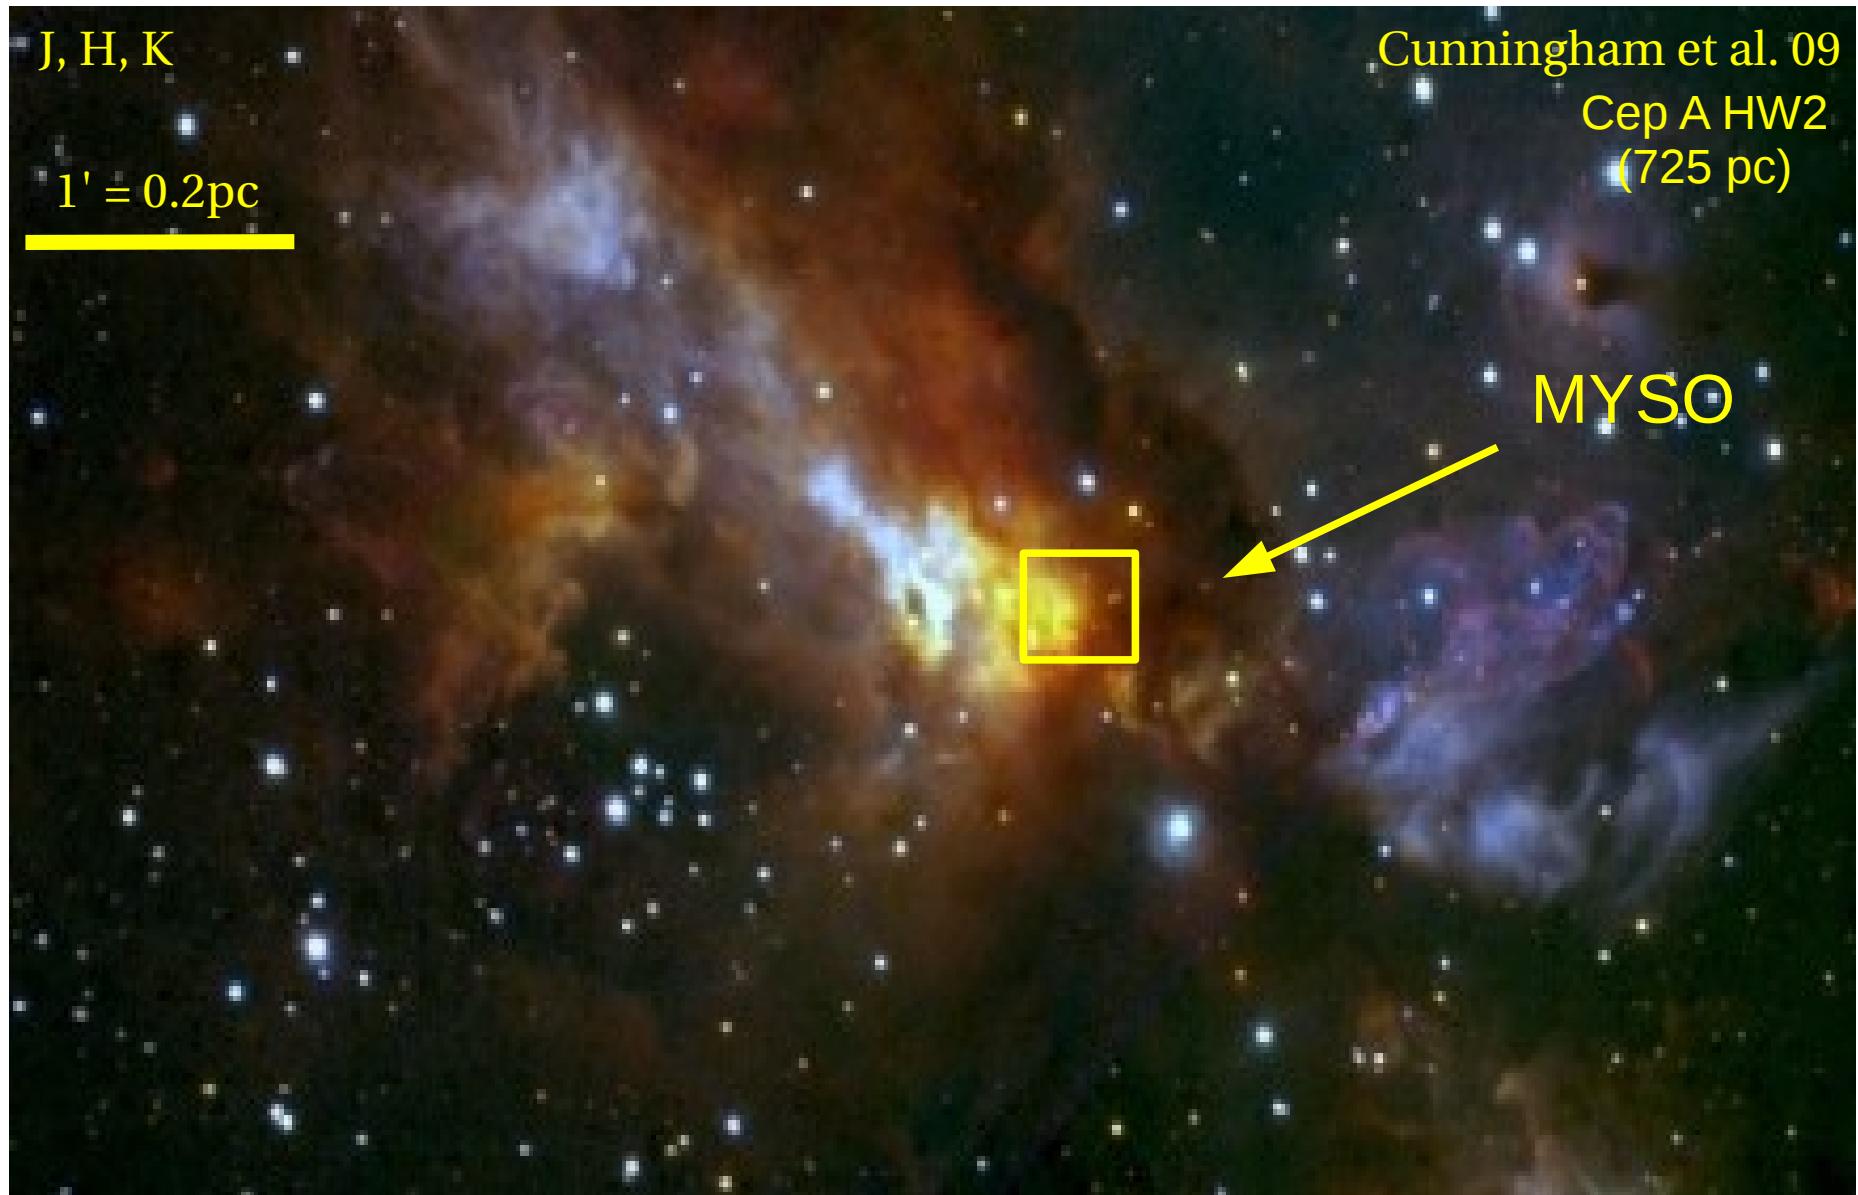

SF in a nutt shell

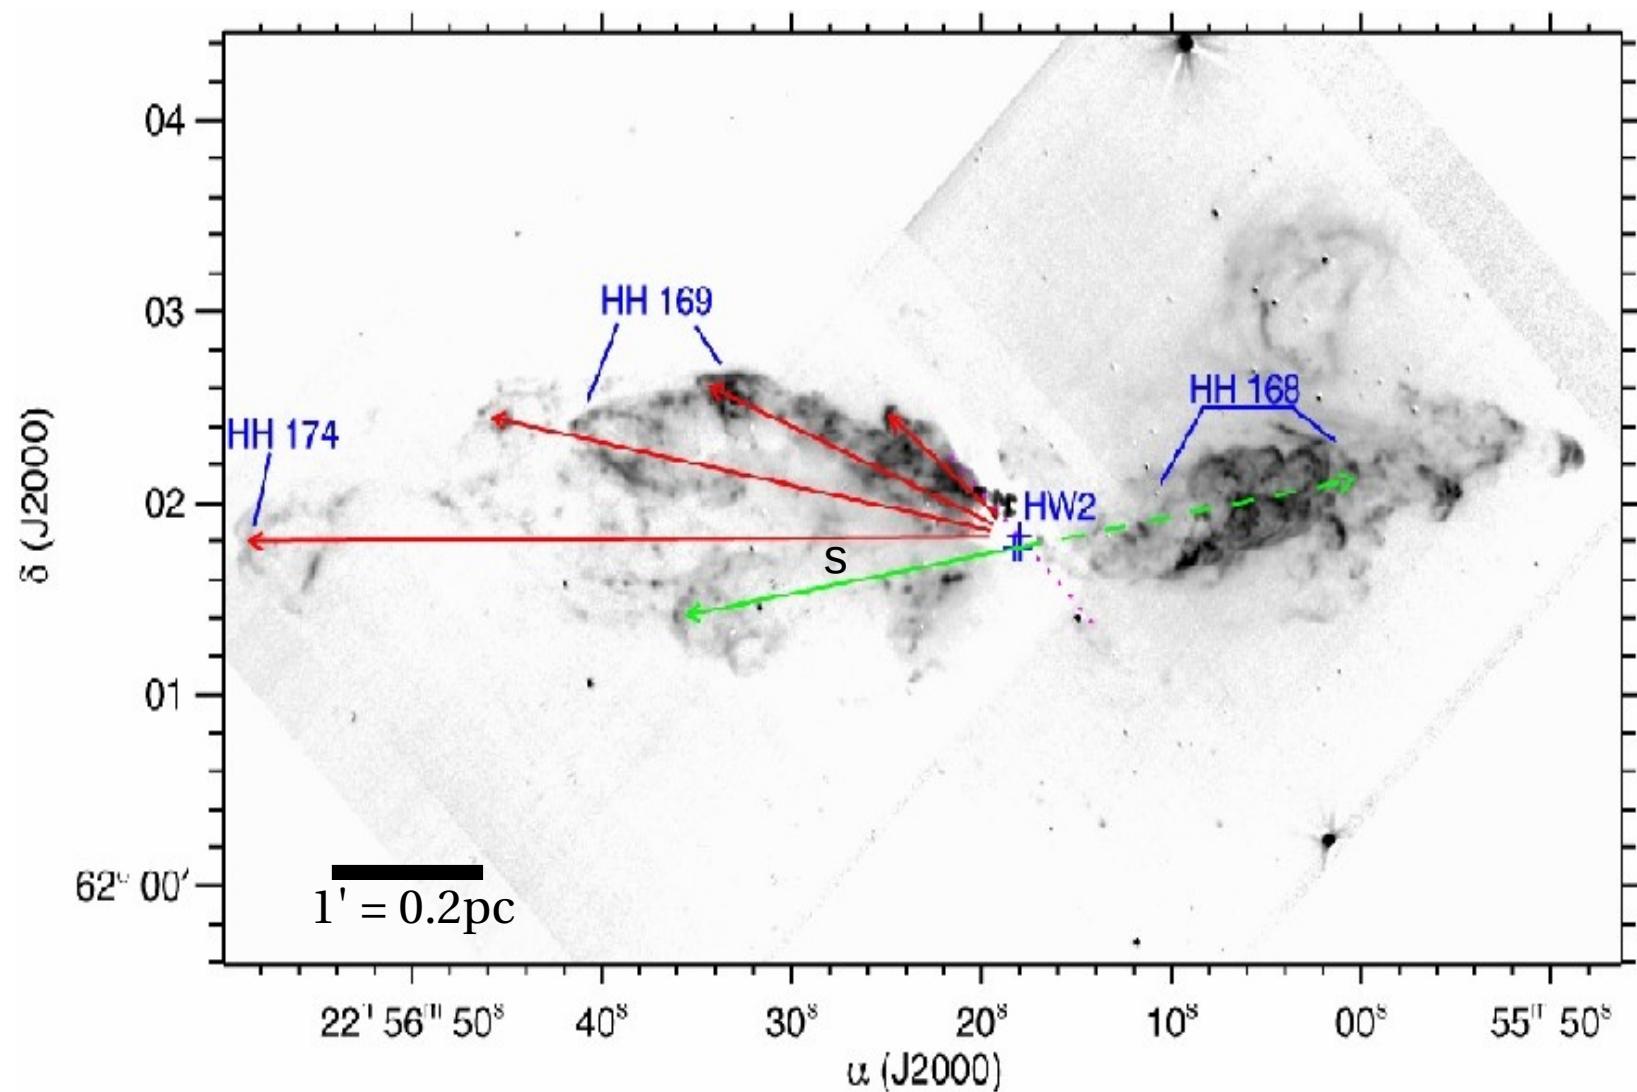

... the mess in HM SF regions

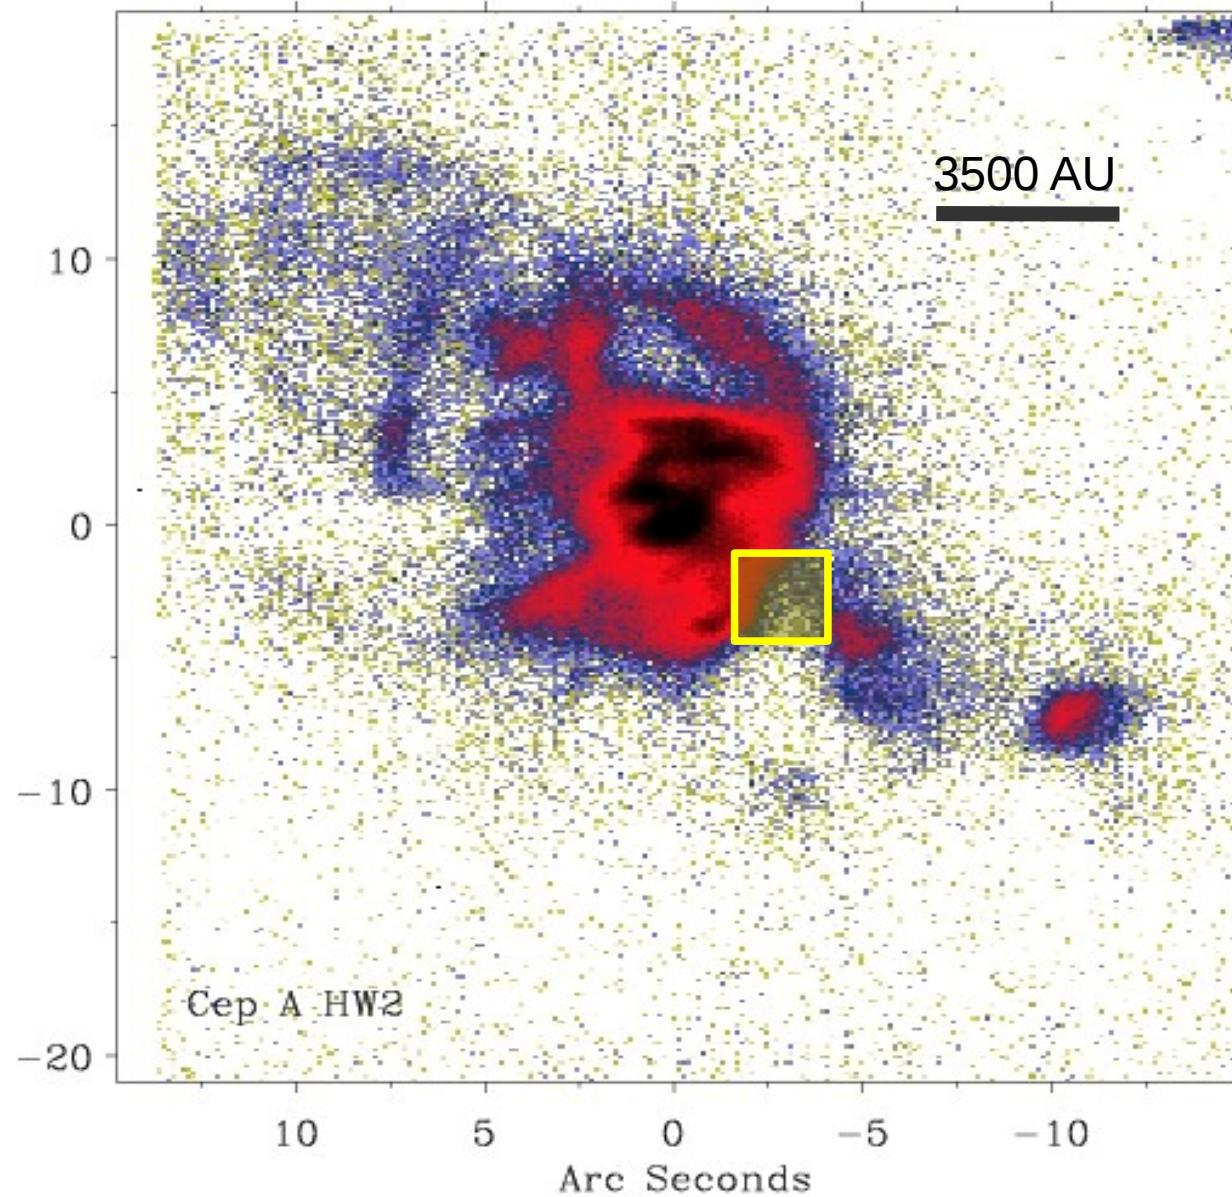

... the mess in HM SF regions

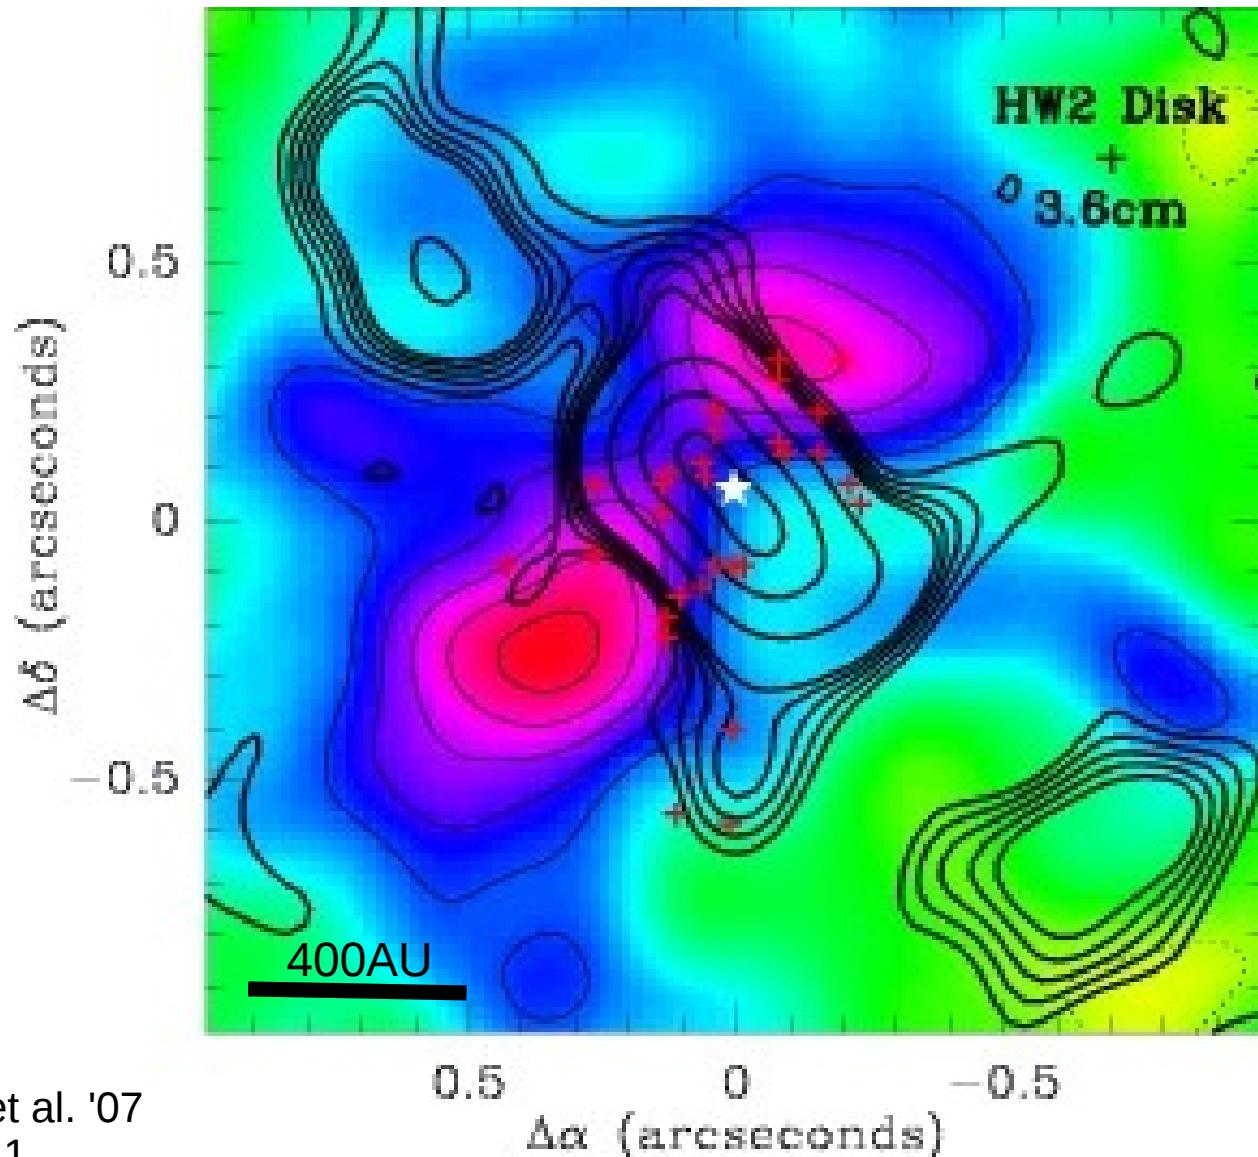

... and in H₂

... and at 24 microns

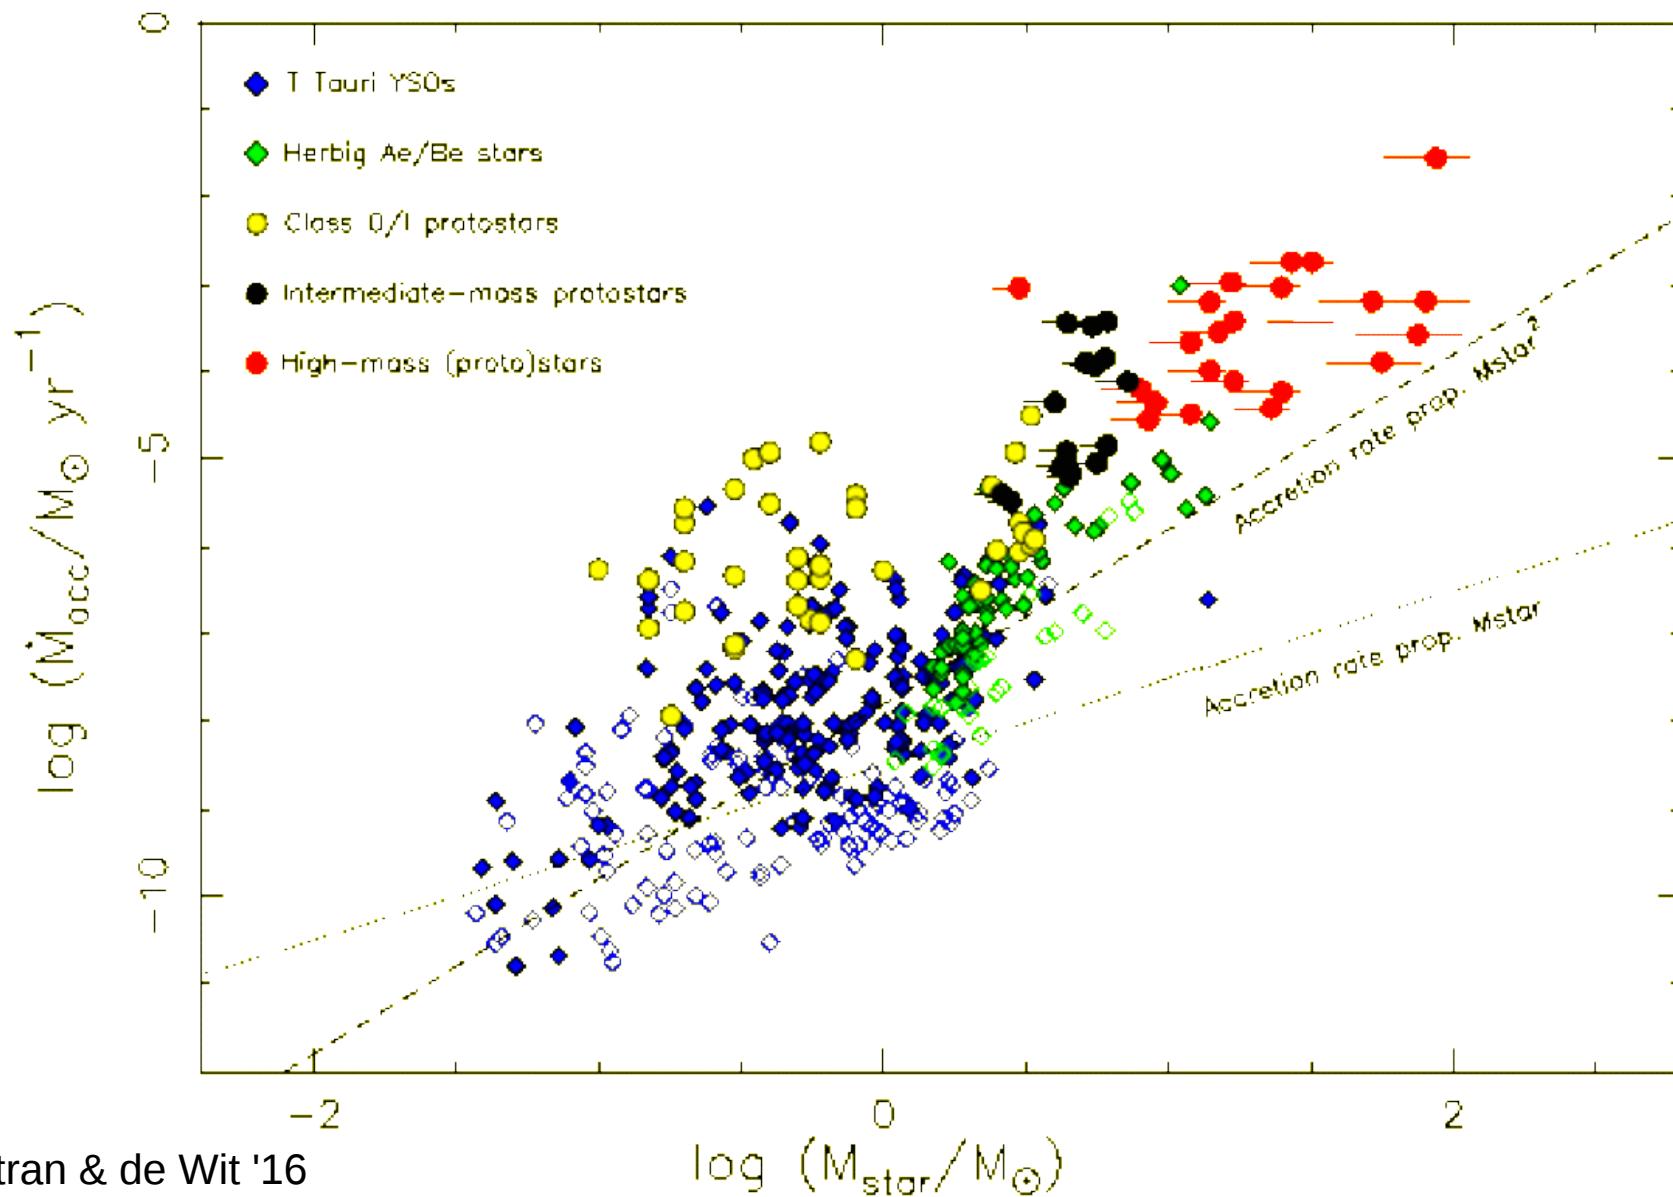

... and in radio (contours) and SO₂ (7mm, VLA).

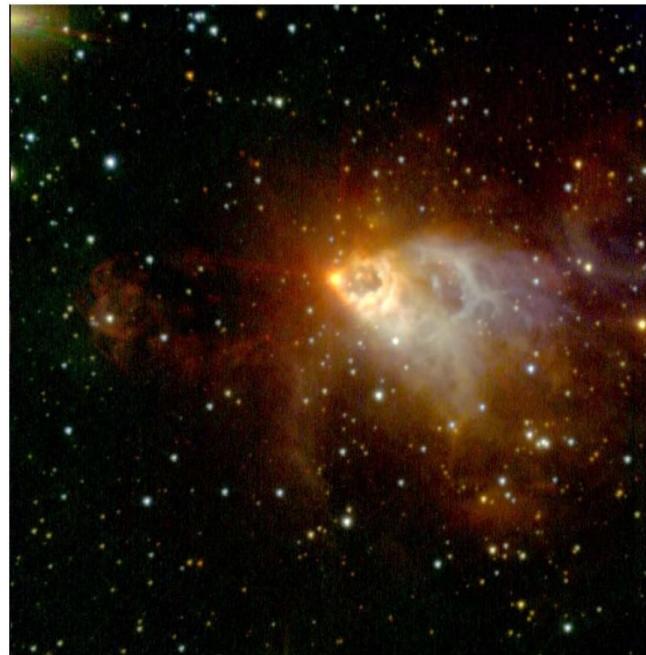

Jimenez-Serra et al. '07
Torrelles et al. '11

High mass-loss rates

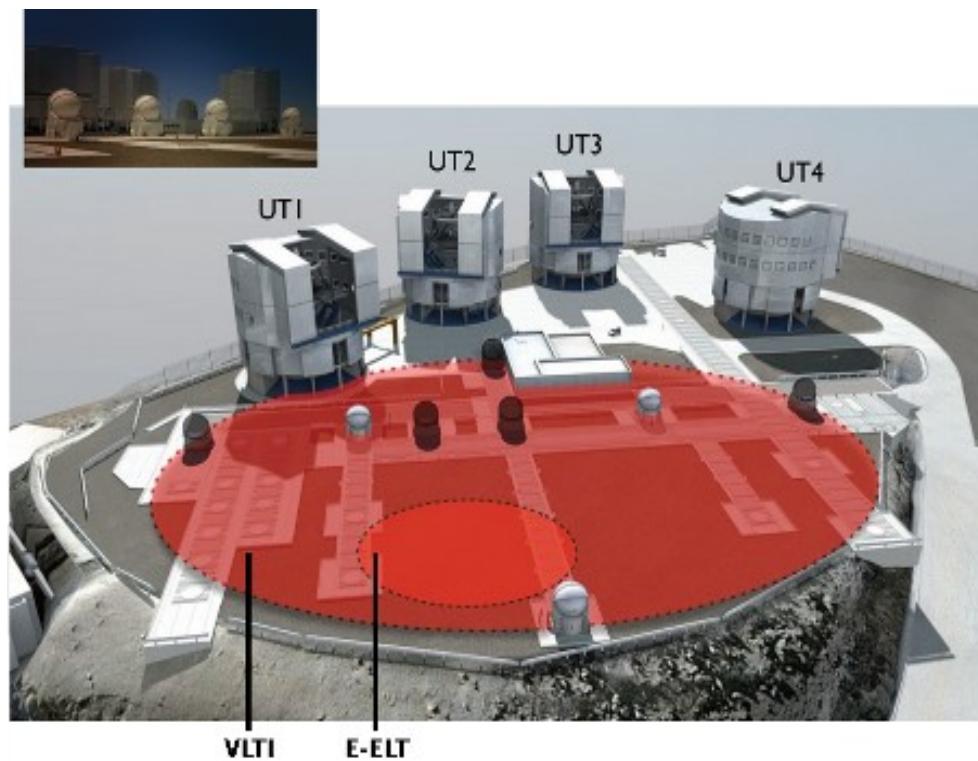

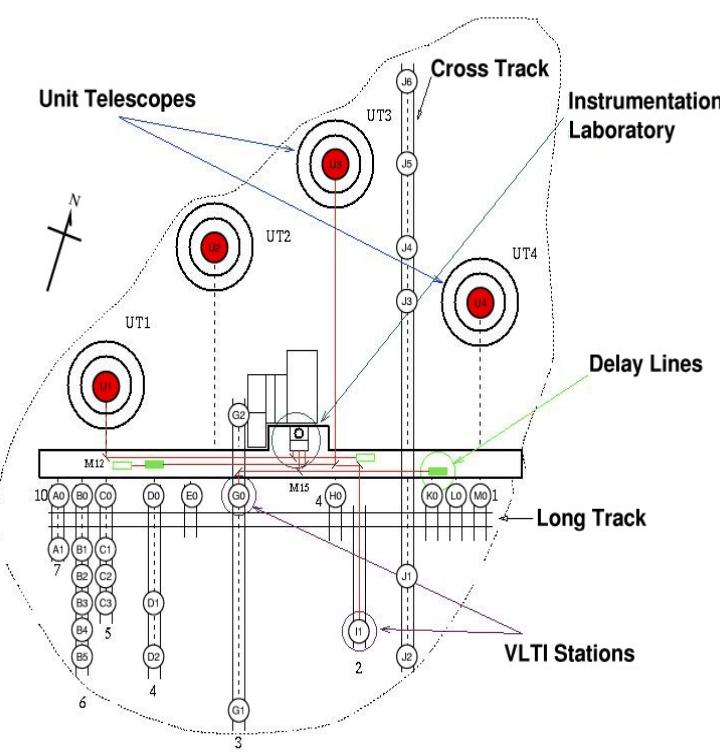

Results

The winds and disks of young massive stars

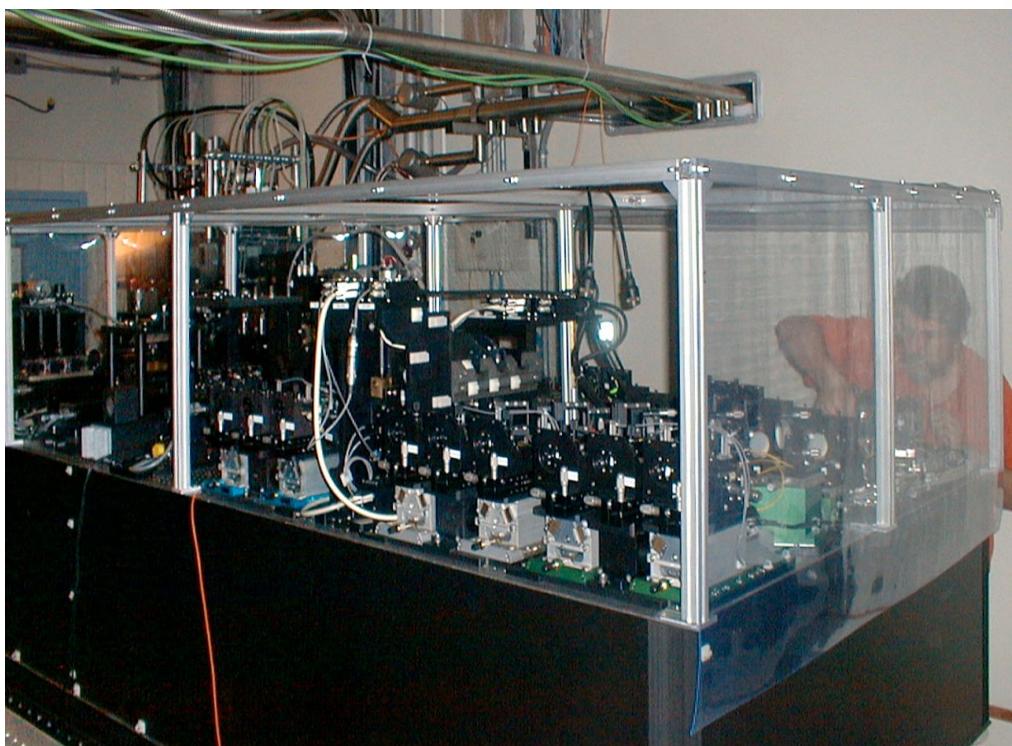

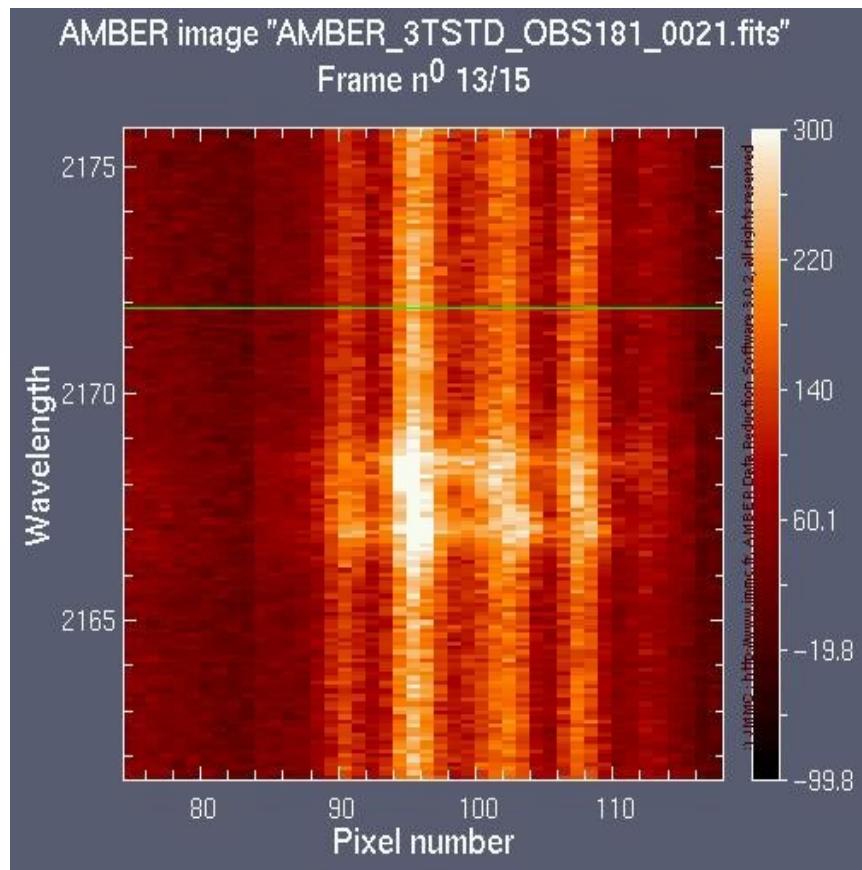

Gemini Observatory/Colin Aspin

by means of the VLT- interferometer

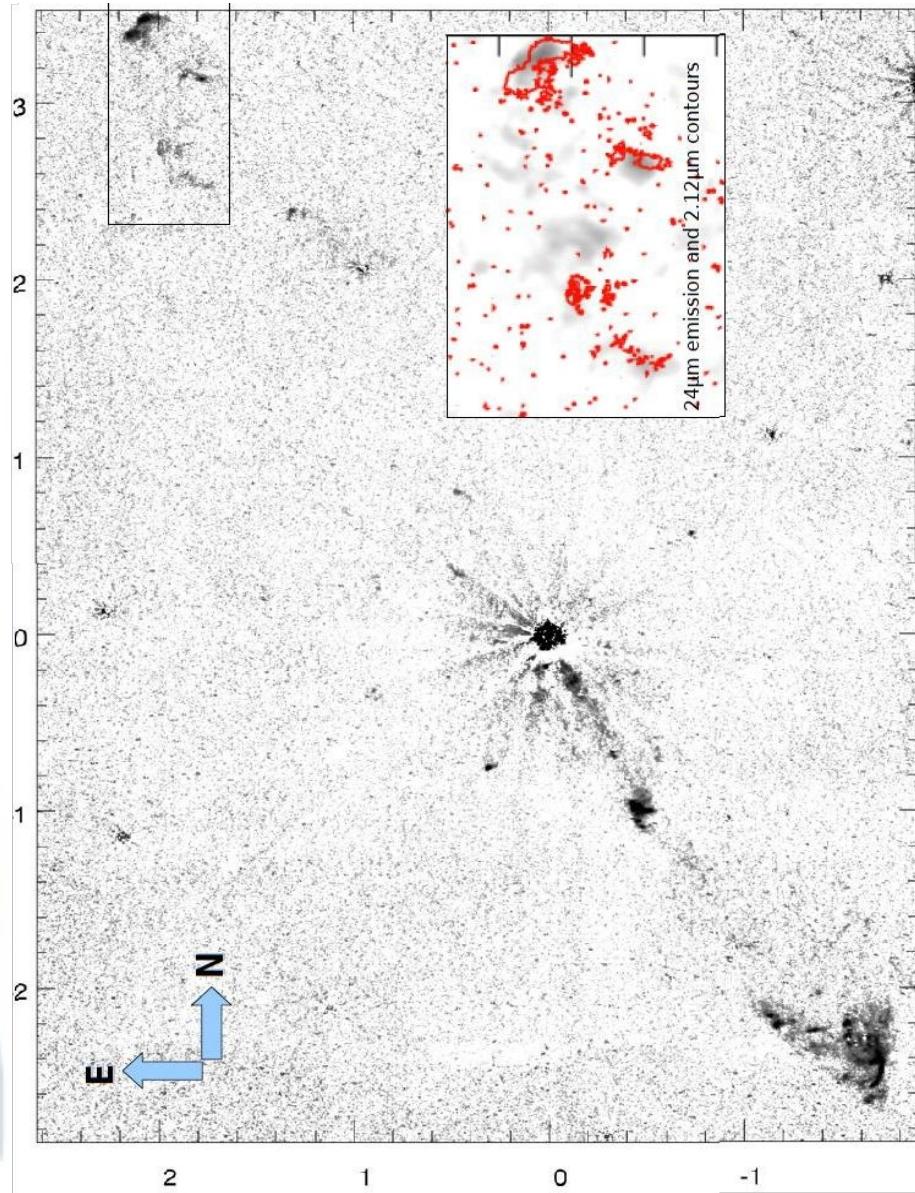

K-band fringes from AMBER

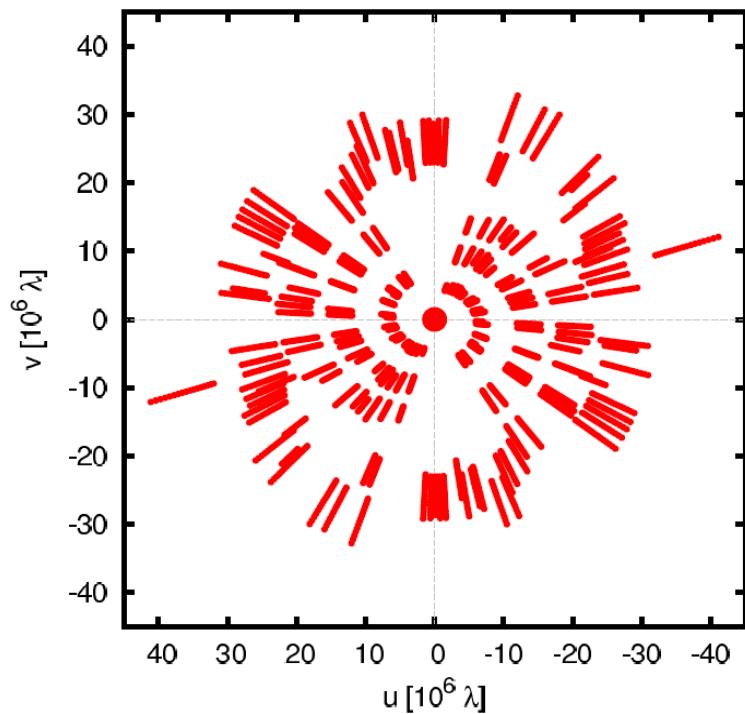

... lots of glass

The best candidate to do so

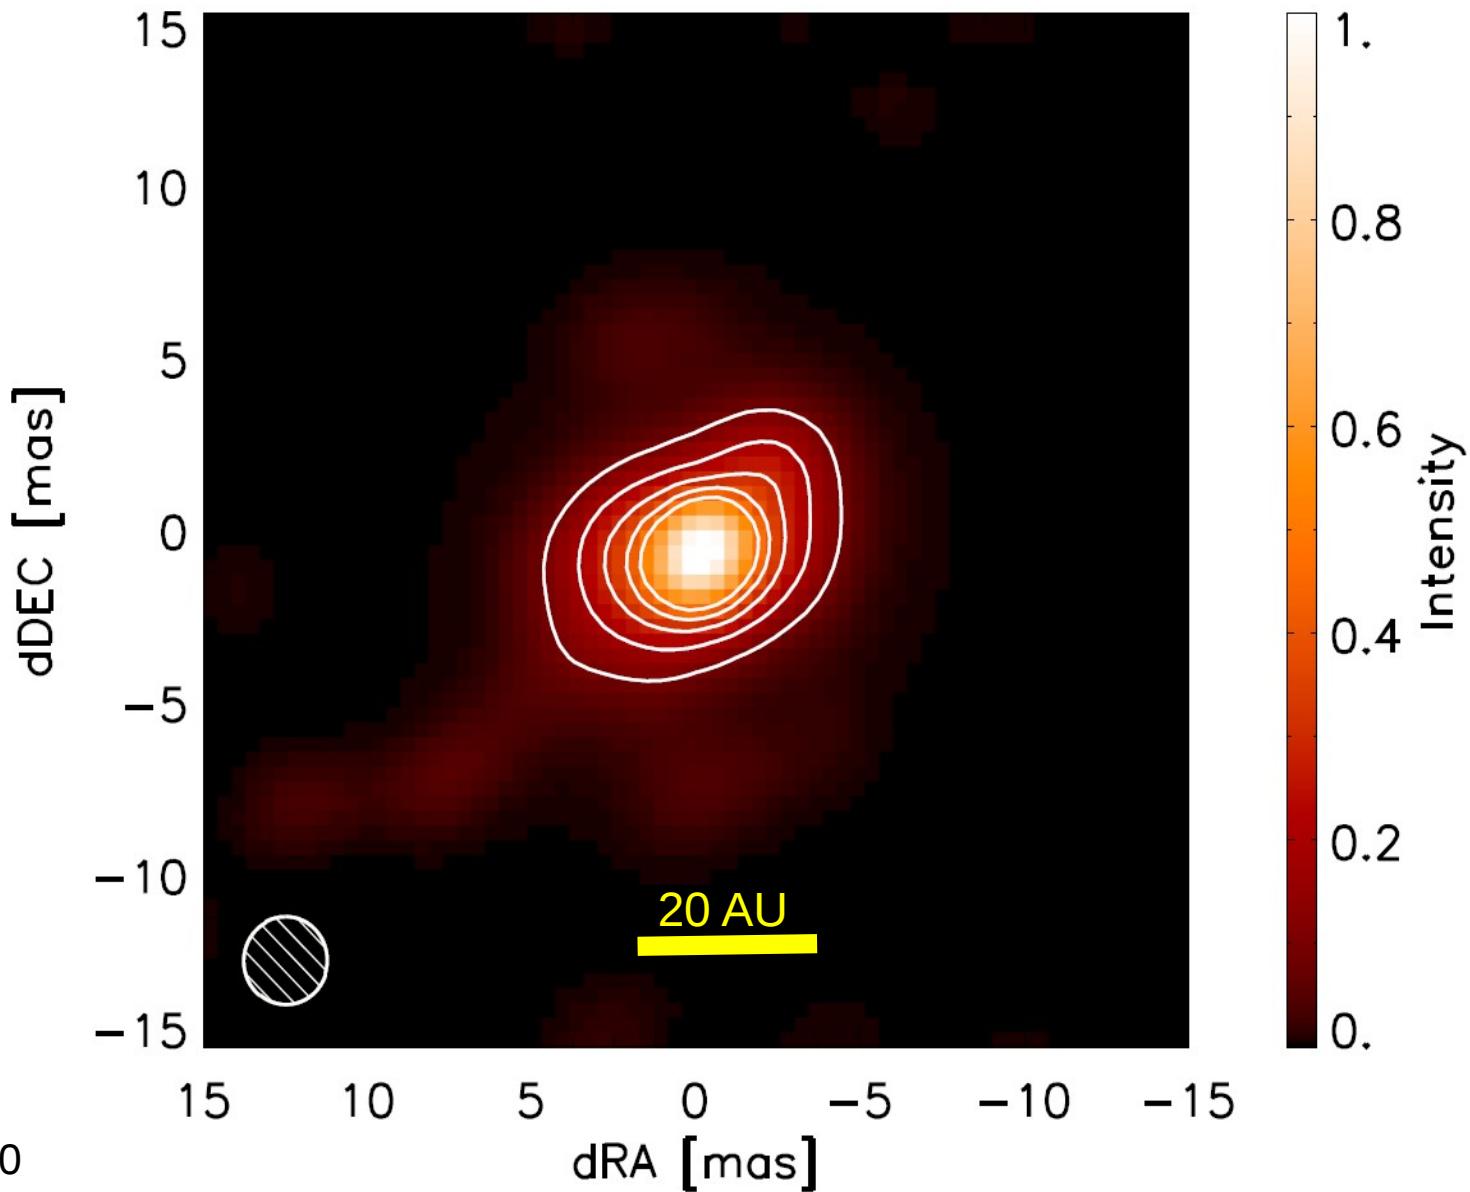

H₂ - continuum

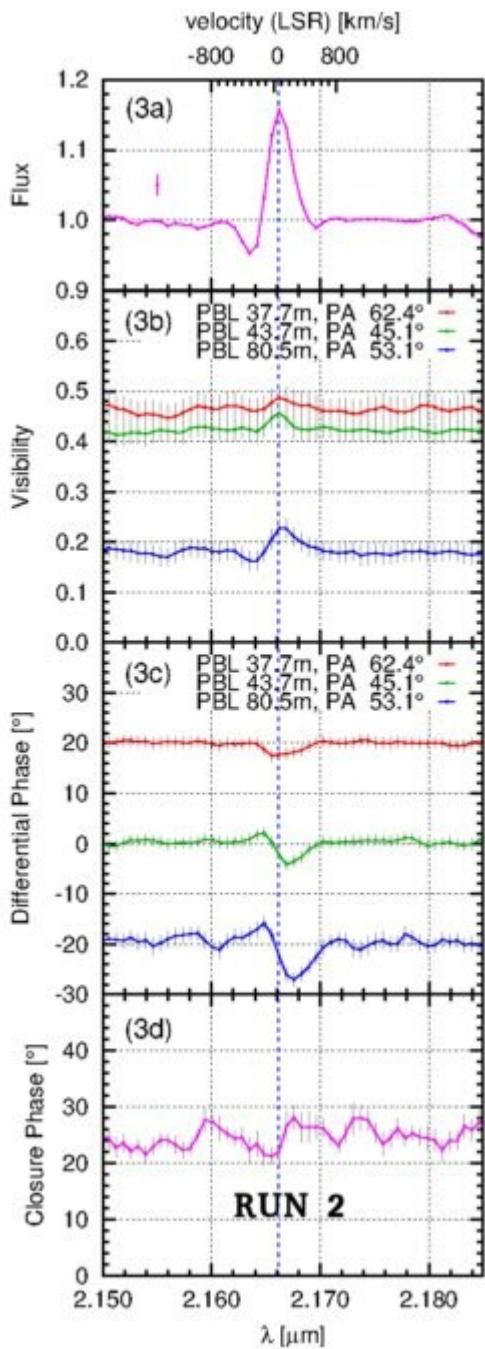

Spat. Resolution 2.4 mas (8.4 AU)

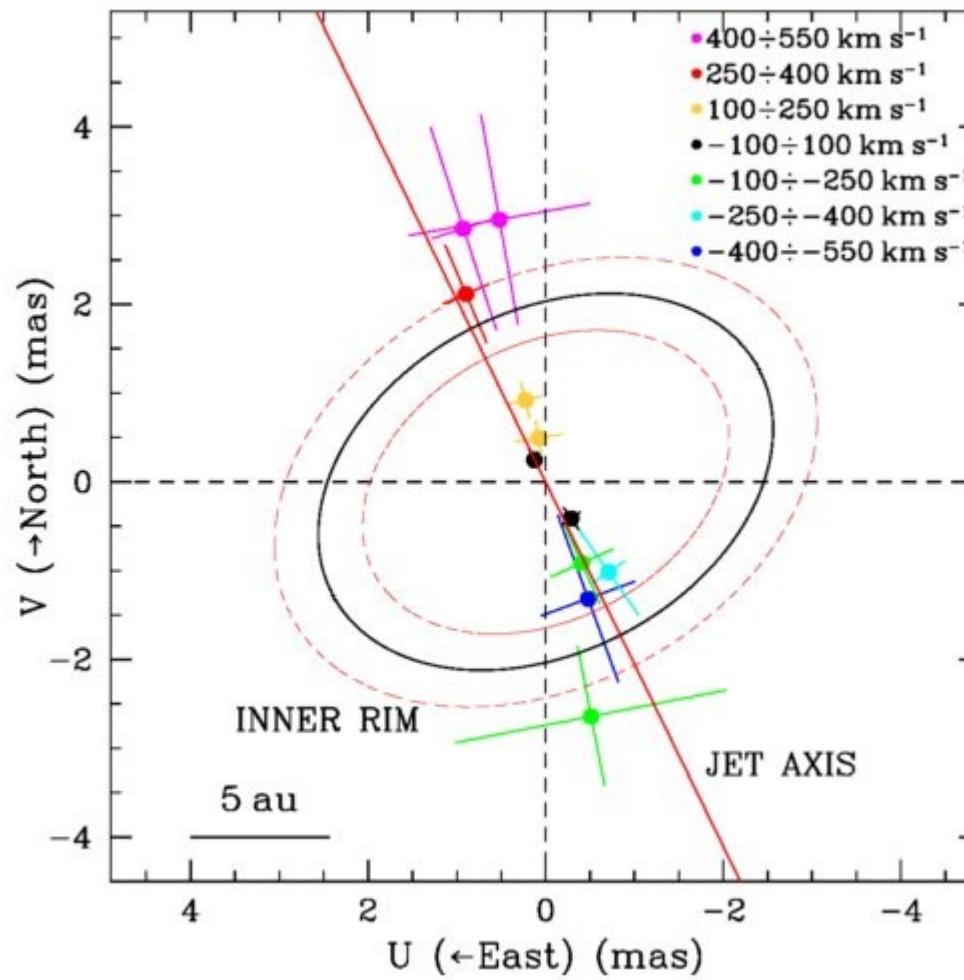

Result 1: a disk at 20 AU

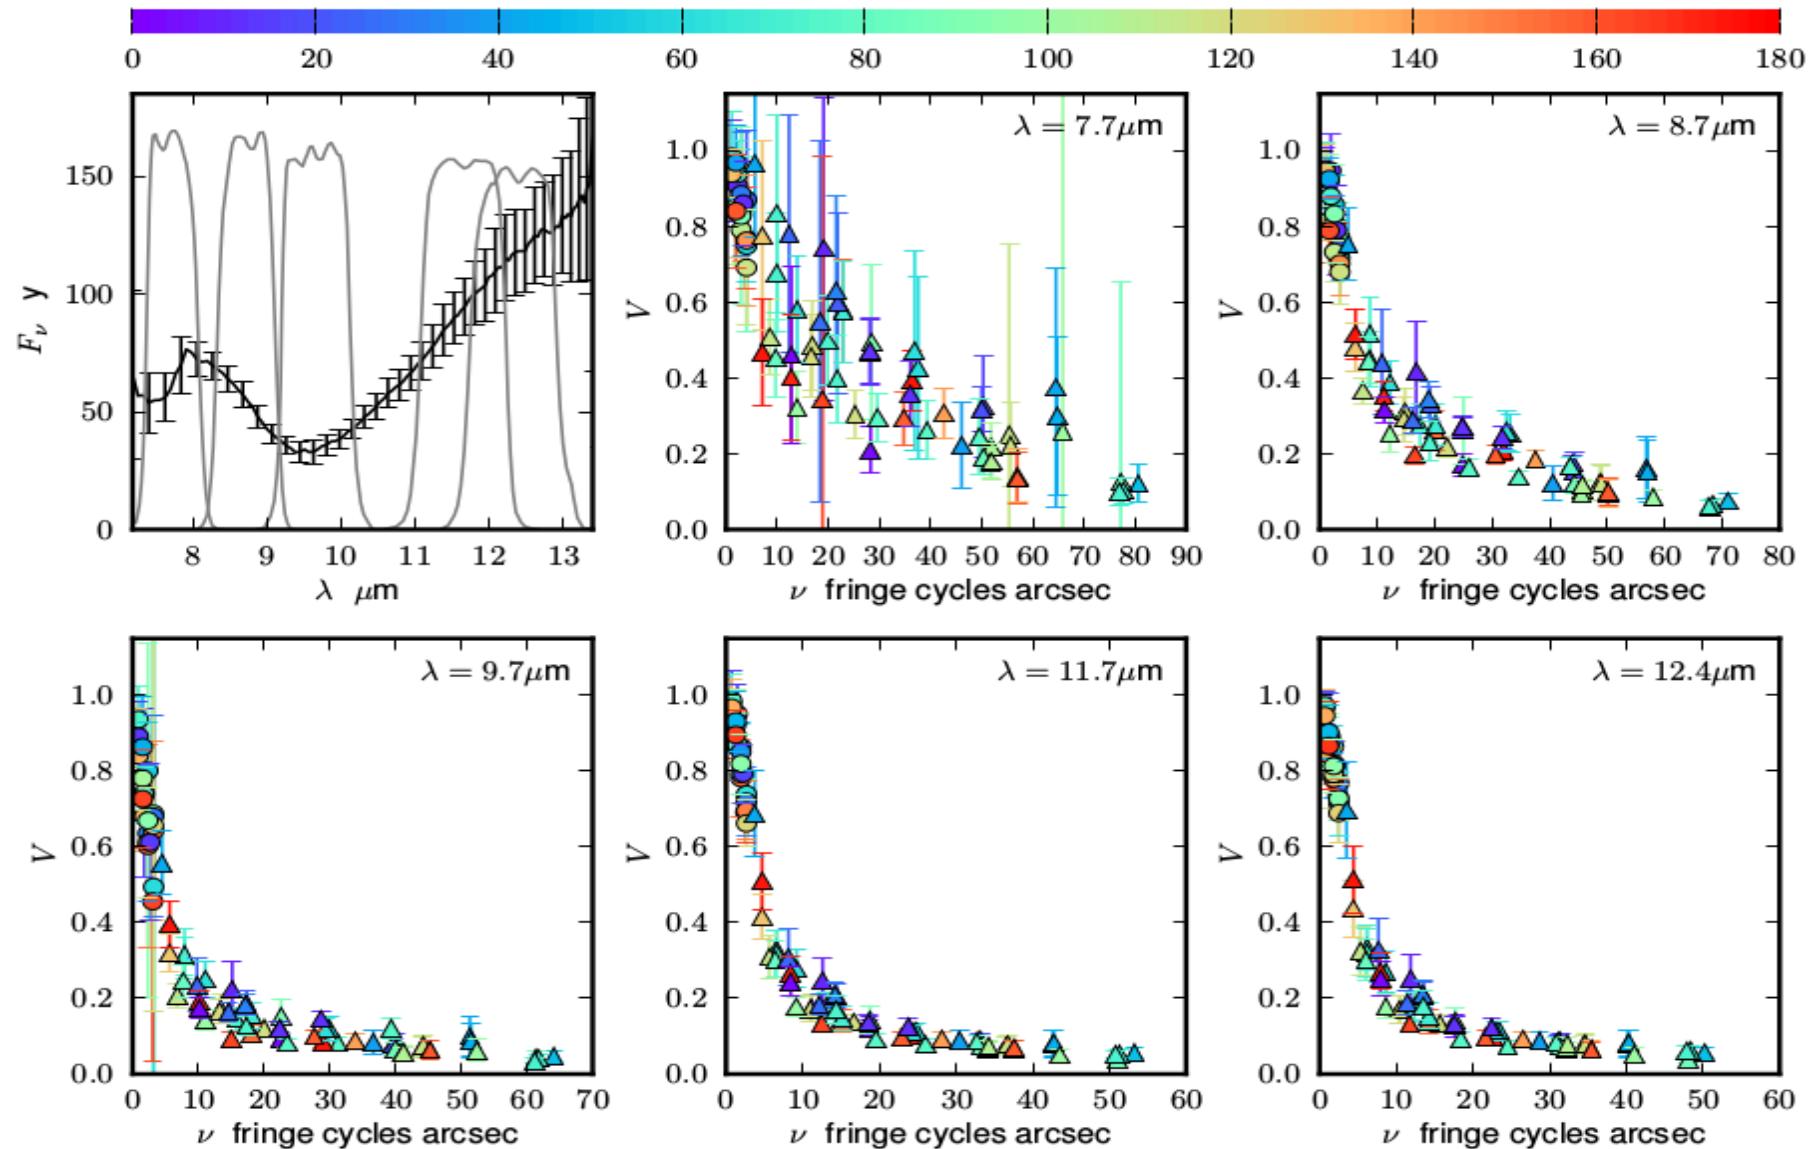

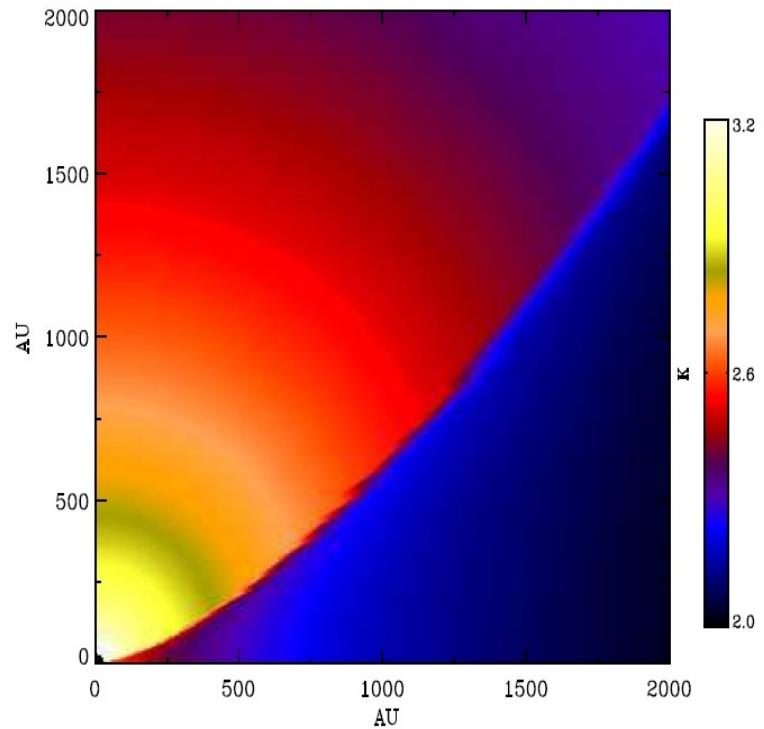

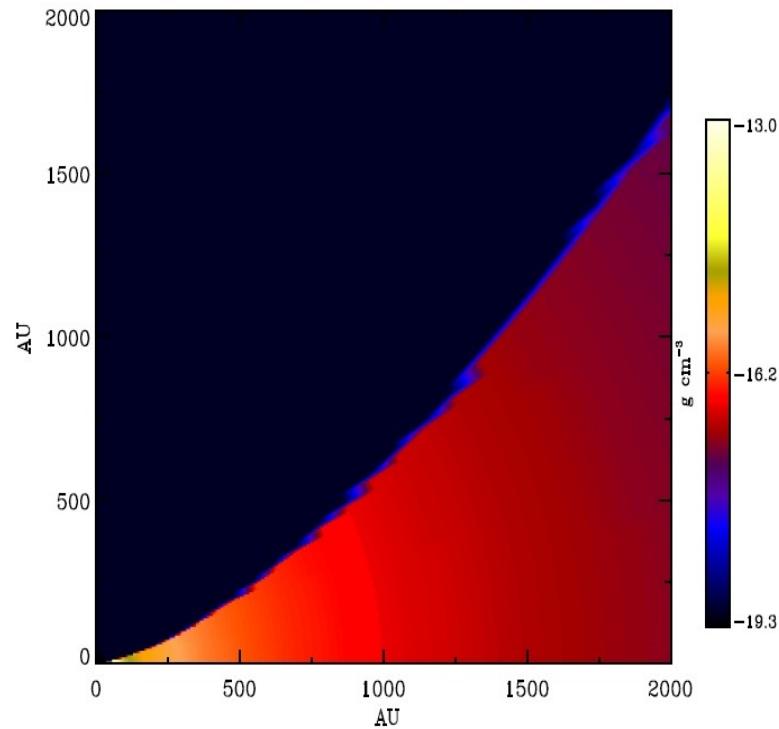

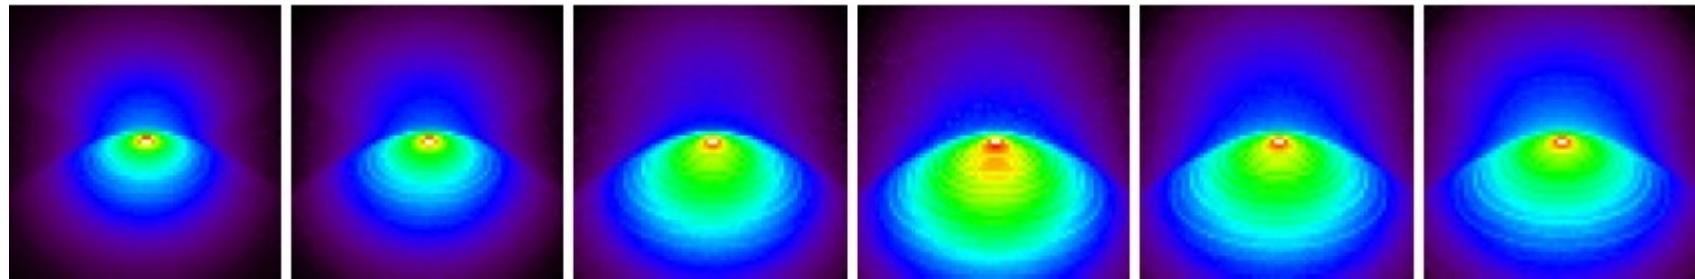

Result 2: astrometry

Result 3: we see cavity emission

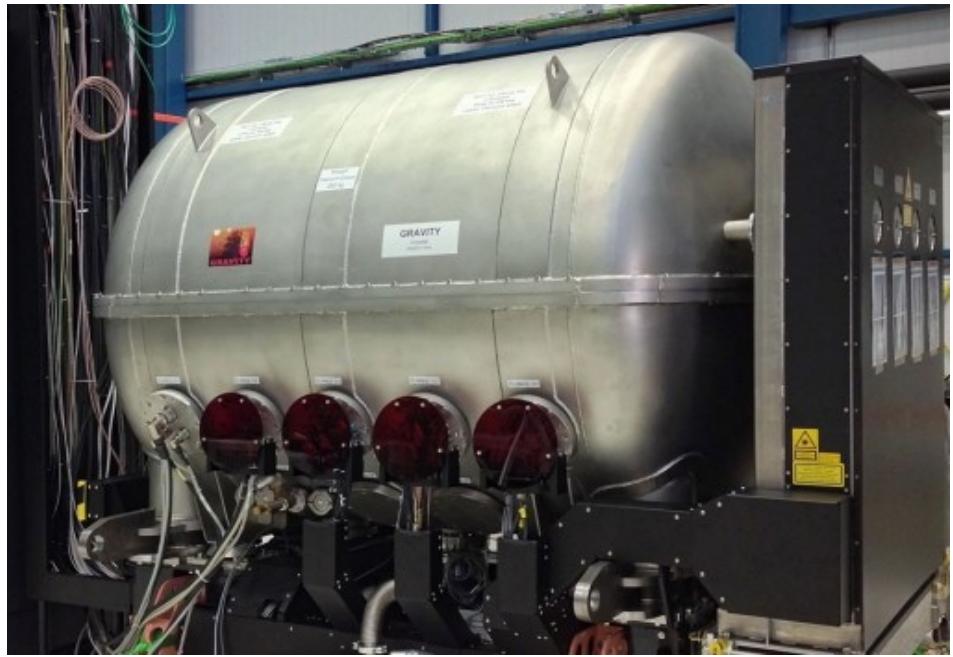

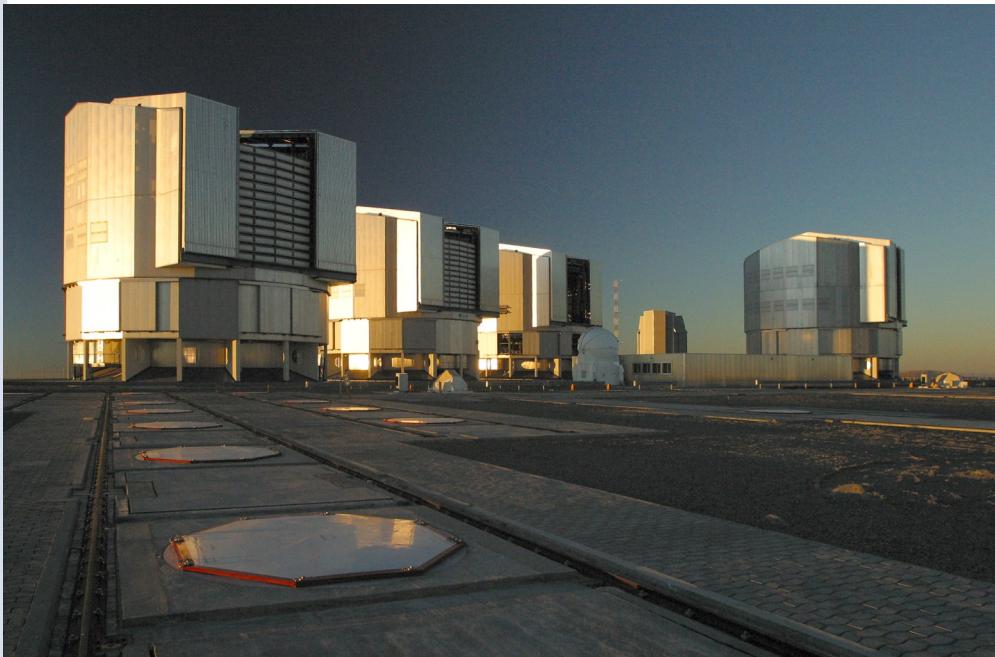

in pictures:

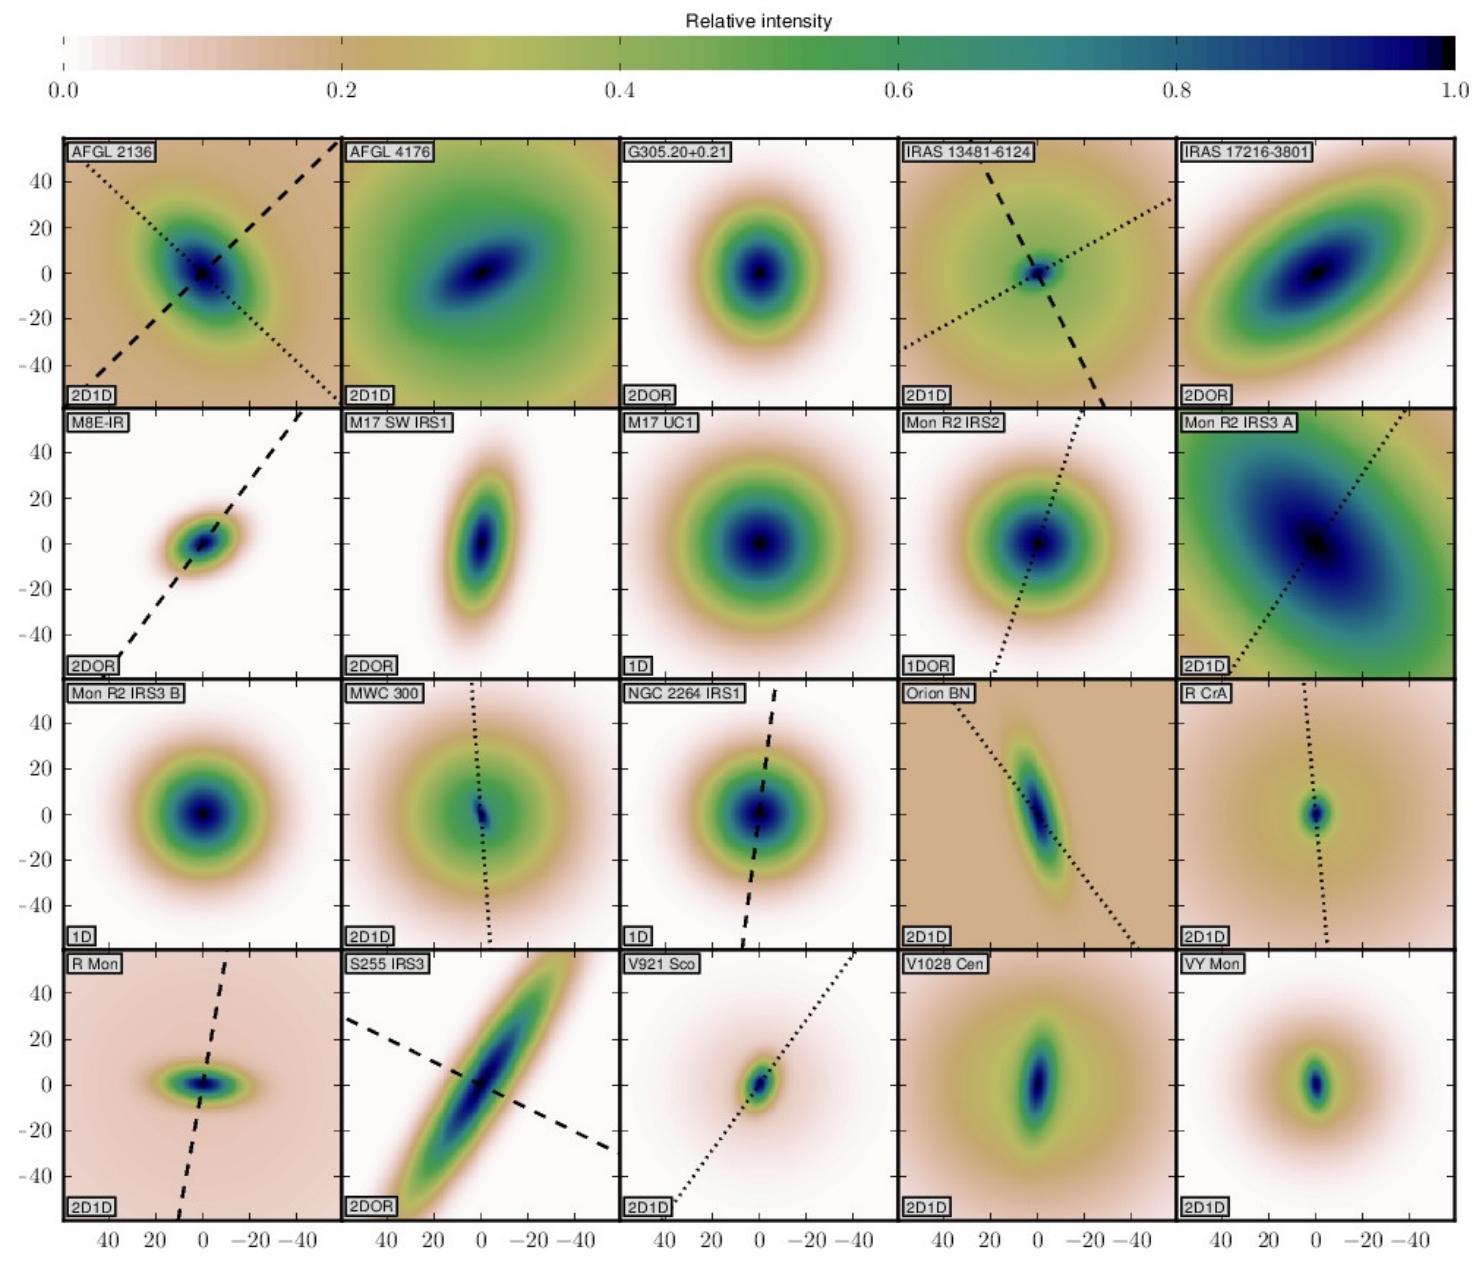

Boley et al. 2016
de Wit et al. 2011

The new VLT-I

THANK YOU!

Is it a rim?

VLTI/AMBER+SED 2.2 μ m
Radiative Transfer model

d

$\frac{0.006''}{20 \text{ AU}}$
